DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 14-23, drawn to a semiconductor device, classified in class 257, subclass 412.
- II. Claims 1-13, drawn to a method for manufacturing a semiconductor device, classified in class 438, subclass 585.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the invention is made by depositing the first insulating layer over the gate and on the sides of the gate abutting the gate sidewalls and then planarizing the first insulating layer to expose the top of the gate or first conduction layer. Masking the top of the gate or first conduction layer and depositing the first insulating layer on the side regions of the gate could make the same invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
